Experiment 5: Mobile Application with Localization Features

Aim:

To design a wireframe for a mobile application that incorporates localization features using Figma.

Procedure:

1. Create a mobile application frame.
2. Design a home screen containing a map and current-location indicator.
3. Add location permission and GPS status elements.
4. Include search, navigation, and destination-selection controls.
5. Connect the screens using prototype links.
6. Preview the design and verify the navigation flow.

OUTPUT:
