Experiment 6: Handoff Scenario Simulation

Aim:

To simulate a handoff scenario in a mobile network and visualize the process using Figma.

Procedure:

1. Create a diagram containing two adjacent cellular coverage areas.
2. Place a base station in each cell and a mobile station between them.
3. Draw arrows to indicate communication with the first base station.
4. Illustrate movement of the mobile station toward the second cell.
5. Show signal measurement, handoff decision, and connection transfer.
6. Use prototype interactions to demonstrate the transition between cells.

OUTPUT:
