Experiment 14: General Packet Radio Service (GPRS) Flowchart

Aim: To develop a flowchart explaining the operation of General Packet Radio Service (GPRS) using Figma.

Procedure:

1. Create a new Figma design file.
2. Add the Mobile Station (MS), Base Transceiver Station (BTS), and Base Station Controller (BSC).
3. Include the Serving GPRS Support Node (SGSN) and Gateway GPRS Support Node (GGSN).
4. Connect the components to represent packet-data transmission.
5. Add arrows showing the flow from the mobile station to an external packet network.
6. Label the components and review the flowchart for accuracy.

Lab record tip: For each experiment, include the Aim, Procedure, Output screenshot, and Result. For interactive experiments, capture the prototype in Figma's Present mode to demonstrate the working design.

OUTPUT:
